Workshops

During the workshops in Consenza the group discussed a possible exploratory questionnaire in order to investigate the issues to be addressed during the creation of the digital manual whose implementation emerged in the previous meetings. Also digital facilitation and green issues, such as rubbish, public greenery and urban decoration were discussed. In this meeting, a first contact was proposed with the municipality of Rende and the municipality of Castrolibero, neighboring the community.

Group scenario interviews

In interviews we discussed the strategies to adopt to best develop community processes and the green and eco-sustainable tools to adopt in these processes. It emerged that we need to make the territory with all its inhabitants the protagonist, without involving them but stimulating their active participation. The useful tools to use can be those useful for participation techniques such as the host and the world café with fishbowl, already successfully tested in the early stages of the project.

Local workshops

Consenza

The group of those present decided to explore two of the 6 themes that emerged during the Open Space Technology: the construction of a digital manual shared in virtual mode within the community and the redevelopment of Largo Luigi De Matera square as a social meeting space.

Cavalese

The workshop has a form of a social lunch at the Cavalese pagoda, plastic free and with the use of rentable tableware from the association - Ecosisters. The participants discussed on the training event, at Gazolini (Valle di Fiemme). The lunch, through the help of thematic books, led to shared reflection on the themes of the environment and the home.

The second meeting was organised in the form of a walk in the company of forestry doctor Ilaria Zorzi, who explained the properties of the local flora and the problem of the bark beetle parasite, which is changing the shape of the forest. At the end, there was a collective sharing to reconstruct the territorial and climatic changes observed over the last few years.

Magione

There are many topics raised: from environmental illegality to the circular economy, from the discovery of river and lake ecosystems to discovery of wildlife, from critical consumption to fashion through the protection of the soil, of biodiversity and ecosystems. The non-formal approach of the activities, combined with field trips and learning by doing, allow young participants to combine theoretical skills with practical experiences and to develop concrete solutions to the critical issues encountered starting from one mapping of strengths and weaknesses of their territory of which they are protagonists.
